EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Lisa Treannie on April 14, 2003.

The application has been amended as follows:

Please amend the title as follows:

Delete "IBD-Related Polymorphisms" and insert instead --Crohn's Disease Related Polymorphisms--

Please amend the specification as follows:

At page 108 of the specification, please delete the designation ">IGR2063a" and replace with -->IGR2063b--.

Claim 7. (Twice amended) A method of predicting the likelihood that an individual is susceptible to [will have] Crohn's disease, comprising the steps of:

- a) obtaining a DNA sample from an individual to be assessed; and
- b) determining the nucleotide present at nucleotide position 218 relative to the 5' most nucleic acid in SEQ ID NO: 1127,

Art Unit: 1634

wherein the presence of a guanine at nucleotide position 218 is indicative of a greater likelihood of susceptibility to Crohn's disease in the individual as compared with an individual having a cytosine at nucleotide position 218.

Claim 9. (Twice amended) A method according to claim 7, wherein the individual to be assessed is an individual at risk for development of Crohn's disease.

Claim 10. (Twice amended) A method of predicting the likelihood that an individual is susceptible to [will have] Crohn's disease, comprising the steps of:

- a) obtaining a DNA sample from an individual to be assessed; and
- b) determining the nucleotide present at nucleotide position 218 relative to the 5' most nucleic acid in SEQ ID NO: 1127,

wherein the presence of a cytosine at nucleotide position 218 is indicative of a reduced likelihood of susceptibility to Crohn's disease in the individual as compared with an individual having a guanine at nucleotide position 218.

Claim 12. (Twice amended) A method according to claim 10, wherein the individual to be assessed is an individual at risk for development of Crohn's disease.

Support for the amendments can be found in the specification at page 10, lines 10-13; and page 23, lines 12-15.

REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: the claims are drawn to a method of predicting the likelihood that an individual is susceptible to Crohn's disease, comprising the steps of obtaining a sample of DNA from the individual to be assessed; and determining the nucleotide present at position 218 relative to the 5' most nucleic acid in SEQ ID NO 1127, wherein the presence of a guanine at nucleotide position 218 is indicative of a greater likelihood that the individual is susceptible to Crohn's disease as compared with an individual having a cytosine at nucleotide position 218 or wherein the presence of a cytosine at nucleotide position 218 is indicative of a decreased likelihood that an individual is susceptible to Crohn's disease as compared with an individual having a guanine at nucleotide position 218. The claims are further drawn to such methods wherein the individual is an individual at risk for development of Crohn's disease.

The specification teaches that a G instead of a C at position 218 of SEQ ID NO: 1127 has a statistically significant association with Crohn's Disease (see Table 4, 3rd row). The claims are allowable over the prior art because the prior art does not teach or fairly suggest an association between the claimed polymorphism and Crohn's disease.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
